Technical Questions

General Programming:

1. What are the four principles of Object-Oriented Programming (OOP)?
2. Can you explain the difference between public, private, and protected access modifiers in Java?
3. What is Polymorphism? Can you write an example in Java that demonstrates both method overloading and method overriding?
4. Write a Python function to check whether a given string is a palindrome.
5. Write a program to reverse a string in Python.
6. How would you reverse a string in Java without using predefined functions?
7. Write an algorithm to swap two numbers without using a third variable.
8. How would you solve the "Two Sum" problem using an efficient approach?
9. What is the difference between recursion and iteration? Provide examples.
10. What is the time complexity of Merge Sort? Explain with an example.
11. Write a Java program to calculate the factorial of a number.
12. Write a program in Java to find the largest element in an array.
13. Write a Python code to print the Fibonacci sequence.

SQL Queries:

1. What is the difference between HAVING and WHERE clauses in SQL?
2. Write an SQL query to select the names of colleges that start with the letters "Ch".
3. What is the difference between TRUNCATE and DELETE in SQL?
4. Write a query to find the second highest salary from an Employee table.
5. Explain the different types of joins in SQL (INNER JOIN, LEFT JOIN, RIGHT JOIN, FULL OUTER JOIN).
6. How would you retrieve duplicate records in SQL?
7. Write a SQL query to get the first 10 rows from a table.
8. Write a SQL query to calculate the average salary of employees in each department.
9. Explain the GROUP BY clause in SQL with an example.
10. What is the HAVING clause in SQL? How is it different from WHERE?

Data Structures & Algorithms:

1. What is the difference between an array and a linked list?
2. What are stacks and queues? Provide real-life examples.
3. Explain the difference between breadth-first search (BFS) and depth-first search (DFS).
4. What is a binary search tree (BST)? How does it differ from a heap?
5. What is time complexity, and how do you analyze it? Give an example with a sorting algorithm.
6. How would you implement a hash map in Python or Java?

7. What is the difference between Merge Sort and Quick Sort? Which one would you use for large datasets and why?
8. What is a Priority Queue? How does it differ from a regular Queue?
9. How would you reverse an array? Write the code for it in your preferred programming language.
10. How does a binary search algorithm work? Can you write a program to implement binary search on a sorted array?

Object-Oriented Programming (OOPs):

1. What are the four pillars of OOPs? Explain with examples.
2. What is encapsulation? Provide a real-life example.
3. What is polymorphism? Differentiate between compile-time and runtime polymorphism.
4. What is method overriding and method overloading? Provide examples.
5. What is inheritance in OOP? Explain with an example.
6. Explain the concept of abstraction in OOP with examples.
7. What is the difference between an abstract class and an interface in Java?
8. What is a constructor in OOP? What is the difference between a default constructor and a parameterized constructor?

Web Development:

1. What is the difference between front-end and back-end development?
2. Explain what RESTful APIs are.
3. What is the difference between HTTP and HTTPS?
4. How do you ensure the security of a web application you've developed?
5. What is Cross-Site Scripting (XSS) and how do you prevent it?
6. What is a Content Delivery Network (CDN), and why is it used?

DevOps & Cloud Computing:

1. What is Docker? How does it help in application deployment?
2. What is Jenkins? Explain how it fits into the CI/CD pipeline.
3. What is a virtual machine, and how does it differ from a container?
4. What is Amazon EC2? What are its uses?
5. Explain the concept of Continuous Integration (CI) and Continuous Deployment (CD).
6. What is Kubernetes? How does it help in container orchestration?
7. What is cloud computing, and what are its different types (IaaS, PaaS, SaaS)?

Data Science & Machine Learning:

1. What is the difference between supervised and unsupervised learning?
2. What is the purpose of the Elbow Method in clustering?
3. What is Linear Regression? Explain with an example.
4. What is the difference between precision and recall in a classification model?
5. What is the difference between a decision tree and a random forest?

6. What are neural networks, and how are they used in machine learning?
7. What is XGBoost, and how is it different from other boosting algorithms?

Behavioral and Situational Questions

Introduction & Background:

1. Tell me about yourself.
2. What is your biggest achievement in life so far?
3. Why do you want to work for this company?
4. Where do you see yourself in five years?
5. What motivates you in your professional life?
6. Why did you choose your field of study?
7. What are your strengths and weaknesses?

Teamwork & Leadership:

1. Have you ever worked in a team? Describe your role and experience.
2. Can you describe a time when you resolved a conflict in a team?
3. How would you manage a team where one member is not contributing effectively?
4. How do you handle feedback or criticism?
5. Give an example of a project where you had to work collaboratively. What challenges did you face?
6. How do you motivate yourself and your team members during tough times?

Workplace Behavior & Culture:

1. How do you handle stressful situations at work?
2. Are you comfortable with rotational shifts or working during weekends?
3. How do you prioritize your tasks when you have multiple deadlines?
4. How would you react if your manager asks you to work overtime or on weekends?
5. Have you ever had a disagreement with a supervisor? How did you handle it?
6. How do you stay updated with the latest industry trends and technologies?

Problem Solving & Critical Thinking:

1. Tell me about a challenging project you worked on and how you overcame the difficulties.
2. Have you ever faced failure in your career? How did you deal with it?
3. How would you approach a problem if you had limited resources and time?
4. Can you describe a situation where you had to learn a new technology quickly? How did you handle it?
5. What would you do if you disagreed with a decision made by your team leader?

Career Goals & Motivation:

1. What is your long-term career goal, and how does this position align with it?
2. Why are you interested in this particular role?
3. What do you expect to learn from this role?
4. How do you keep yourself motivated in a challenging work environment?
5. What do you want to achieve in your first year with the company?

Behavioral Questions:

1. Tell me about a time when you had to deal with a difficult customer or client.
2. Can you describe a situation where you had to make a decision without all the necessary information?
3. Tell me about a time when you worked on a project with tight deadlines. How did you manage your time?
4. Describe a situation where you had to handle multiple tasks simultaneously. How did you prioritize?
5. How do you manage conflicts within a team, especially when team members have differing opinions?
6. Tell me about a time when you had to change your approach to a problem or project halfway through. What prompted the change, and what was the outcome?

Miscellaneous Questions

1. What is your understanding of the Agile methodology?
2. How would you explain a technical concept to someone who doesn't have a technical background?
3. Do you have any certifications related to this field? If yes, explain.
4. Have you worked with cloud technologies? If so, which ones and how did you utilize them in your projects?
5. What is your experience with version control systems like Git and GitHub?

Software Quality Analyst - Preparation Document

Dear Students,

We hire tech enthusiasts with a broad set of technical skills who are ready to tackle some of technology's greatest challenges. The hiring process has been designed from the ground level to avoid any false positives and in order to help you to get through our process.

We have curated this document after examining some of the most frequently asked questions & also keeping in mind the preparation that you may require in order to crack our selection process. This document will come in handy in order to understand about the position and the tips and tricks that will help you prepare for the hiring process for Software Quality Analyst at Josh Technology Group.

Please Note:- This document is intended to provide you with the required guidance and sample material that would be helpful in preparation and this in no way guarantees your selection.

Excited much to participate in the selection process? We look forward to your participation!

Wish you all the luck for the hiring process!

Let's Get Started

Are you prepared? Check for the following points :

1) Most importantly, you've a strong foundation of Software Testing.
2) You can solve the problems by visualizing and thinking through the solutions.
3) Ability to understand any mobile application's or webapps on different platforms.
4) Good thinking and catching power.
5) You know and can explain your findings in front of the team after getting any issues.
6) Knowledge of any language is only a plus. But the basics are a must-have.
7) Good to have programming concepts like oops, polymorphism, git etc.

Steps to getting started with the preparation :

1) You can start with the guides mentioned below and practice by:
    a) Test Cases & Bug Report - Basic knowledge of writing test cases and bug reports is a must.
    b) STLC & SDLC - The first thing you have to learn is SDLC in brief and STLC in detail.
    c) Testing types with phases - The next step is to learn types of testing and their phases in detail.
    d) Web apps and Mobile Apps - Web apps are required in detail and mobile apps are required in brief.
    e) SQL - Basic knowledge of SQL with basic queries.
    f) API - Basic knowledge of API.
    g) Good understanding of any programming language.

2) Below are some general best practices of above mentioned topics:
    h) Test Cases Reference
    i) Bug Report Reference
    j) STLC & SDLC Reference
    k) Types of Testing Reference
    l) Web apps and Mobile Apps Reference
    m) SQL Reference
    n) API Reference

**Please note that the above references are just for understanding the topics.*
